

## **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions and listing of the claims in the application:

1. (Original) An adhesive article comprising:
  - a release liner comprising a release surface, a molding layer and a second surface;
  - a continuous layer of adhesive having a first surface, a second surface and end edges, wherein the first surface of the adhesive is adhered to the release surface of the release liner;
  - a first pattern of first non-adhesive material forms having a first surface and a second surface; and
  - a second pattern of second non-adhesive material forms having a first surface and a second surface, wherein the second pattern partially overlaps the first pattern; at least one of the first and second patterns is at least partially embedded in the release surface and molding layer of the release liner; the first surface of each of the two patterns is in contact with the release surface of the release liner, the second surface of each of the two patterns is in contact with the adhesive layer; and the first surface of at least a portion of the first pattern of non-adhesive material forms is in a plane that is different from the plane of the first surface of at least a portion of the second pattern of non-adhesive material forms.
2. (Original) The adhesive article of claim 1 wherein each of the non-adhesive material forms independently has an average thickness of about 30 nanometers to about 100  $\mu\text{m}$ .
3. (Original) The adhesive article of claim 1 wherein each of the non-adhesive material forms independently has an average thickness of about 3  $\mu\text{m}$  to about 30  $\mu\text{m}$ .

4. (Original) The adhesive article of claim 1 wherein each pattern of non-adhesive material forms independently is applied by printing, vacuum metallization or sputtering.

5. (Original) The adhesive article of claim 1 wherein at least one of the non-adhesive materials independently comprises at least one printing ink, UV curable ink or coalescing ink.

6. (Original) The adhesive article of claim 1 wherein each pattern of non-adhesive material forms independently comprises a plurality of dots, lines or combinations thereof.

7. (Original) The adhesive article of claim 1 wherein each pattern of non-adhesive material forms independently comprises a plurality of lines having an average width of from about 12  $\mu\text{m}$  to about 250  $\mu\text{m}$  and an average thickness of from about 30 nanometers to about 100  $\mu\text{m}$ .

8. (Original) The adhesive article of claim 1 wherein the each pattern of non-adhesive material forms independently comprises a plurality of lines, and wherein at least 50% of the lines intersect the end edges of the adhesive layer.

9. (Original) The adhesive article of claim 1 wherein each pattern of non-adhesive material forms comprises a plurality of non-intersecting lines, and wherein the lines from the first pattern and the lines from the second pattern intersect to form a grid pattern.

10. (Original) The adhesive article of claim 1 wherein the adhesive layer comprises a pressure sensitive adhesive or a heat-activated adhesive.

11. (Original) The adhesive article of claim 1 wherein at least one of the first and second non-adhesive material comprises a porous non-adhesive material.

12. (Original) The adhesive article of claim 11 wherein the porous non-adhesive material comprises an elastomer.

13. (Original) The adhesive article of claim 1 wherein the adhesive is a pressure sensitive adhesive.

14. (Original) The adhesive article of claim 1 wherein the release surface of the release liner has a textured or matte surface.

15. (Original) The adhesive article of claim 14 wherein the first surface of the adhesive layer has a textured surface that is complementary to the textured surface of the release liner.

16. (Original) The adhesive article of claim 1 wherein the release surface of the release liner has a Sheffield roughness of at least about 50.

17. (Original) The adhesive article of claim 1 further comprising a facestock adhered to the second surface of the adhesive layer.

18. (Original) The adhesive article of claim 1 further comprising a second release liner adhered to the second surface of the adhesive layer.

19. (Original) The adhesive article of claim 1 wherein the second surface of the release liner has a release coating thereon.

20. (Original) The adhesive article of claim 19 further comprising a facestock having a first and second surface wherein the first surface is in contact with the second

surface of the adhesive layer and a second adhesive layer having a first and second surface wherein the first surface of the second adhesive layer is in contact with the second surface of the facestock.

21. (Original) The adhesive article of claim 20 further comprising a second release liner adhered to the second surface of the second adhesive layer.

22-44. (Cancelled)

45. (Withdrawn) A method of making an adhesive article comprising:

(a) providing a release liner comprising a molding layer having a release surface and a second surface;

(b) applying a first pattern of a first non-adhesive material to a first portion of the release surface;

(c) applying a second pattern of a second non-adhesive material to a second portion of the release surface, wherein the second pattern partially overlaps the first pattern;

(d) embedding at least one of the first or second non-adhesive materials into the molding layer; and

(e) applying an adhesive layer having a first surface and a second surface onto the release surface of the release liner, wherein the first surface of the adhesive layer is adhered to the exposed portions of the non-adhesive materials and to the release surface of the release liner.

46. (Withdrawn) The method of claim 45 wherein (f) a facestock is applied to the second surface of the adhesive layer.

47. (Withdrawn) The method of claim 46 wherein the embedding comprises applying heat and pressure to the non-adhesive materials and the release liner using a roller or platen.

48. (Withdrawn) The method of claim 45 wherein the second surface of the release liner is a release surface or a release surface is applied to the second surface of the release liner.

49. (Withdrawn) The method of claim 48 further comprising applying a second adhesive layer to the release surface on the second surface of the release liner.

50. (Withdrawn) The method of claim 45 wherein at least one of the first pattern and the second pattern comprises a plurality of lines wherein at least about 50% of the liner intersect the end edges of the adhesive layer.

51. (Withdrawn) The method of claim 45 wherein the adhesive layer comprises a pressure sensitive adhesive or a heat-activated adhesive.

52. (Withdrawn) A method of making an adhesive article comprising:

- (a) providing a release liner comprising a molding layer having a release surface and a second surface;
- (b) embossing a first pattern in a first portion of the release surface;
- (c) applying a second pattern of second non-adhesive material forms to a second portion of the release surface wherein the second pattern partially overlaps and at least partially fills the embossed first pattern in the molding layer; and
- (d) applying an adhesive layer having a first surface and a second surface onto the release surface of the release liner wherein the first surface of the adhesive layer is adhered to the exposed portions of the non-adhesive materials and to the release surface of the release liner.

53. (Withdrawn) The method of claim 51 wherein the first embossed pattern is provided by

- (a) applying a first pattern of first non-adhesive material forms to a first portion of the release liner,

(b) embedding the first pattern of the first non-adhesive material forms into the molding layer, and

(c) removing the first non-adhesive material from the molding layer and leaving an embossed pattern corresponding to the first pattern of first non-adhesive material forms.

54. (Withdrawn) The method of claim 52 wherein a facestock is applied to the second surface of the adhesive layer.

55. (Original) An adhesive article comprising:  
a continuous layer of adhesive having a first surface, a second surface and end edges, and  
a first pattern of first non-adhesive material forms and a second pattern of second non-adhesive material forms wherein the second pattern partially overlaps the first pattern; at least one of said first and second patterns is at least partially embedded in the first surface of the adhesive layer; each of said first and second patterns has an exposed first surface and an opposite second surface that is in contact with the adhesive; the first surface of at least a portion of the first pattern of non-adhesive forms is in a plane that is different from the plane of the first surface of at least a portion of the second pattern of non-adhesive forms; and at least a portion of the first pattern protrudes from the first surface of the adhesive layer.

56. (Original) The adhesive article of claim 55 further comprising a facestock adhered to the second surface of the adhesive layer.

57. (Original) The adhesive article of claim 55 further comprising a release liner adhered to the second surface of the adhesive layer.

58-60. (Cancelled)
